Subject Index

Index to volumes 1 and 2

A/Beijing 79 (H1N1) wild type virus, mating with the Xia-*ts* donor virus, characterization of the genotype and level of attenuation of an influenza A reassortant virus produced by, 189

Administration, intradermal, of human diploid cell vaccine, efficacy of a new packaging and delivery system for: pre-exposure rabies prophylaxis, 185

Anthrax: the disease in relation to vaccines, 125

Anti-rabies treatment of dog-bite victims in Lagos, Nigeria: Trial of suckling mouse brain and fetal bovine kidney cell rabies vaccine, 257

Atrophic rhinitis in swine, biochemical and immunological analyses of the cell surface of *Bordetella bronchiseptica* isolates with special reference to, 265

Bacterial fish vaccines, the future of, 249

BCG vaccines:, dried, multiple comparison of: stability at 37°C and persistence of strains in the mouse spleen, 149

Biochemical and immunological analyses of the cell surface of *Bordetella bronchiseptica* isolates with special reference to atrophic rhinitis in swine, 265

Biotechnology: old issues confront biotechnology and new products, 235

Bordetella bronchiseptica isolates, biochemical and immunological analyses of the cell surface of, with special reference to atrophic rhinitis in swine, 265

Brucella abortus Strain 19, vaccination of cattle with, administered by differing routes and doses, 133

Cattle, use of a synthetic antigen to predetermine the responsiveness of, to vaccine-induced immunity, 136

Cattle, vaccination of, with *Brucella abortus* Strain 19 administered by differing routes and doses, 133

Cervical, carcinoma, type 2 herpes simplex virus induced, prevention of, in mice by prior immunization with a vaccine prepared from type 1 herpes simplex virus, 13

Chitin and its derivatives, immunological activity of, 93

Cholera vaccine, effect of storage temperatures on opacity and total nitrogen content of, 284

Comment: 3, 171, 234

Computerization of foot and mouth disease virus strain relationship data, 42

Conference Reports: 53, 54, 111, 165, 227, 229

Contaminants, virus, and serum proteins, elimination of, during hepatitis B vaccine preparation, 209

Corynebacterium kutscheri infection in cortisone-treated mice, effect of stearoyl-*N*-acetylmuramyl-L-alanyl-D-isoglutamine on host resistance to, 261

Cytomegalovirus, human, supernatant virus release as a differentiating marker between low passage vaccine strains of, 23

Cytomegalovirus vaccine: persistence of humoral immunity following immunization of renal transplant candidates, 215

Deoxycholate subunit influenza vaccine, responses to one or two doses of, in a primed population, 100

Editorials: 2, 58, 114, 170, 234

Elimination of serum proteins and potential virus contaminants during hepatitis B vaccine preparation, 209

Empigen-treated virus, immunogenicity of, in animals. Use of zwitterionic detergent for the preparation of an influenza virus vaccine: 2, 199

Fish vaccines, bacterial, the future of, 249

Foot and mouth disease vaccine antigens, observations on the stability of, 26

Foot and mouth disease virus, airborne, response of sheep vaccinated with large doses of vaccine to challenge by, 157

Foot and mouth disease virus, computerization of strain relationship data, 42

Gastroenteritis virus, transmissible, lactogenic immunity to, induced by a subunit immunogen, 37

Genetically engineered poxvirus: a novel approach to the construction of live vaccines, 204

Goat, and sheep, pox vaccines, progress towards, 4

Graphical method for comparative statistical study of vaccine potency tests, 81

Graphical method for the comparative statistical study of vaccine potency assays, some applications of a, 87

HBV-vaccination in recipients of kidney allografts, 255

HBV vaccine, immunogenicity of, in healthy Chinese children, 10

Hepatitis B vaccine preparation, elimination of serum proteins and potential virus contaminants during, 209

Herpes simplex virus genital infection of the female guinea-pig as a model for the evaluation of an experimental vaccine, 141

Hepatitis B vaccines, 3

Herpes simplex virus mutant, mice immunized with a non-pathogenic, and reinfected with the pathogenic parental strain, protection against establishment of latent infections in, 219

Herpes simplex virus, type 1, prevention of type 2 herpes simplex virus induced cervical carcinoma in mice by prior immunization with a vaccine prepared from, 13

HTLV-III, when will prevention of infection be possible?, 171

Human diploid cell vaccine, efficacy of a new packaging and delivery system for intradermal administration of: pre-exposure rabies prophylaxis, 185

Humoral immunity, persistence of, following immunization of renal transplant candidates: cytomegalovirus vaccine, 215

Immunogenicity of HBV vaccine in healthy Chinese children, 10

Immunological activity of chitin and its derivatives, 93

Induction of neutralizing antibodies by poliovirus capsid polypeptides VP_1, VP_2 and VP_3, 17

Influenza A reassortant virus produced by mating the Xia-*ts* donor virus with A/Beijing 79 (H1N1) wild type virus, characterization of the genotype and level of attenuation of, 189

Influenza vaccine, deoxycholate subunit, responses to one or two doses of, in a primed population, 100

Influenza virus, inactivated, vaccines in man: a comparative study of subunit and split vaccines using two methods for assessment of antibody responses, 75

Influenza virus vaccine, use of zwitterionic detergent for the preparation of, 1. Preparation and characterization of disrupted virons, 193

Influenza virus vaccine, use of zwitterionic detergent for the preparation of, 2. Immunogenicity of Empigen-treated virus in animals, 199

Insurance, no-fault, for vaccine-related injuries, 173

Kidney allografts, HBV-vaccination in recipients of, 255

Lactogenic immunity to transmissible gastroenteritis virus induced by a subunit immunogen, 37
Latent infections, protection against establishment of, in mice immunized with a non-pathogenic herpes simplex virus mutant and reinfected with the pathogenic parental strain, 219
Leprosy - in persuit of a vaccine, 238
Letters to the Editor: 167, 172, 237
Live vaccines, a novel approach to the construction of: genetically engineered poxviruses, 204
Malaria, vaccination against: its plausibility, and the present state of research, 115

Meningococcal group A polysaccaride-tetanus toxoid conjugates, prepared by two methods, physicochemical and immunological characterization of, 31
Multiple comparison of dried BCG vaccines: stability at 37°C and persistence of strains in the mouse spleen, 149

Nitrogen content, total, and opacity, of cholera vaccine, effect of storage temperatures on, 284
No-fault insurance for vaccine-related injuries, 173

Observations on the stability of foot and mouth disease vaccine antigens, 26
Old issues confront biotechnology and new products, 235
Opacity and total nitrogen content of cholera vaccine, effect of storage temperatures on, 284

Packaging and delivery system, new, efficacy of, for intradermal administration of human diploid cell vaccine: pre-exposure rabies prophylaxis, 185
Patent Reports: 49, 107, 162, 224, 287
Physicochemical and immunological characterization of meningococcal group A polysaccharide–tetanus toxoid conjugates prepared by two methods, 31
Poliomyelitis, vaccinology of, 59
Poliovirus capsid polypeptides VP_1, VP_2 and VP_3, induction of neutralizing antibodies by, 17
Poliovirus vaccines new: a molecular approach, 177
Polypeptides, poliovirus capsid, VP_1, VP_2 and VP_3, induction of neutralizing antibodies by, 17
Potency assays, vaccine, some applications of a graphical method for the comparative statistical study of, 87
Potency tests, vaccine, graphical method for comparative statistical study of, 81
Pox vaccines, sheep and goat, progress towards, 4
Poxviruses, genetically engineered: a novel approach to the construction of live vaccines, 204
Pre-exposure rabies prophylaxis: efficacy of a new packaging and delivery system for intradermal administration of human diploid cell vaccine, 185
Prevention of type 2 herpes simplex virus induced cervical carcinoma in mice by prior immunization with a vaccine prepared from type 1 herpes simplex virus, 13
Progress towards sheep and goat pox vaccines, 4
Protection against establishment of latent infections in mice immunized with a non-pathogenic herpes simplex virus mutant and reinfected with the pathogenic parental strain, 219

Rabies prophylaxis, pre-exposure, efficacy of a new packaging and delivery system for intradermal administration of human diploid cell vaccine, 185
Rabies vaccine, trial of suckling mouse brain and fetal bovine kidney cell: anti-rabies treatment of dog-bite victims in Lagos, Nigeria, 257
Recombinant mammalian cell lines, use of, for vaccine production, 234
Renal transplant candidates, persistence of humoral immunity following immunization of: cytomegalovirus vaccine, 215
Response of sheep vaccinated with large doses of vaccine to challenge by airborne foot and mouth disease virus, 157
Responses to one or two doses of a deoxycholate subunit influenza vaccine in a primed population, 100
Rubella antibodies, persistence of, 15 years after subcutaneous administration of Wistar 27/3 strain live attenuated rubella virus vaccine, 274
Rubella vaccines, live attenuated, studies on the reactogenicity and immunogenicity of the BRD-2 and RA27/3, 277
Rubella vaccine (Rudivax), vaccination with a live RA 27/3 strain, a follow-up study, 281

Sheep and goat pox vaccines, progress towards, 4
Sheep vaccinated with large doses of vaccine, response of, to challenge by airborne foot and mouth disease virus, 157
Some applications of a graphical method for the comparative statistical study of vaccine potency assays, 87
Split and subunit vaccines, a comparative study, using two methods for assessment of antibody responses: inactivated influenza virus vaccines in man, 75
Statistical study, comparative, of vaccine potency assays, some applications of a graphical method for, 87
Statistical study, comparative, of vaccine potency tests, graphical method for, 81
Stearoyl-*N*-acetylmuramyl-L-alanyl-D-isoglutamine, effect of, on host resistance to *Corynebacterium kutscheri* infection in cortisone-treated mice, 261
Subunit and split vaccines, a comparative study of, using two methods for assessment of antibody responses: inactivated influenza virus vaccines in man, 75
Subunit immunogen, lactogenic immunity to transmissible gastroenteritis virus, induced by a, 37
Subunit influenza vaccine, deoxycholate, responses to one or two doses of, in a primed population, 100
Supernatant virus release as a differentiating marker between low passage vaccine strains of human cytomegalovirus, 23
Synthetic antigen, use of, to predetermine the responsiveness of cattle to vaccine-induced immunity, 136

Tetanus toxoid conjugates, meningococcal group A polysaccaride, conjugates, prepared by two methods, physicochemical and immunological characterization of, 31
Trial of suckling mouse brain and fetal bovine kidney cell rabies vaccine: anti-rabies treatment of dog-bite victims in Lagos, Nigeria, 257

Use of recombinant mammalian cell lines for vaccine production, 234
Use of synthetic antigen to predetermine the responsiveness of cattle to vaccine-induced immunity, 136
Vaccination against malaria: its plausibility and the present state of research, 115

Vaccination of cattle with *Brucella abortus* Strain 19 administered by differing routes and doses, 133
Vaccination with a live RA 27/3 strain rubella vaccine (Rudivax), a follow-up study, 281
Vaccinology of poliomyelitis, 59
Views: 173, 235
When will prevention of HTLV-III infection be possible?, 171
Xia-*ts* donor virus, mating, with A/Beijing 79 (H1N1) wild type virus, influenza A reassortant virus produced by, characterization of the genotype and level of attenuation of, 189

Zwitterionic detergent, use of, for the preparation of an influenza virus vaccine I: Preparation and characterization of disrupted virions, 193
Zwitterionic detergent, use of, for the preparation of an influenza virus vaccine: 2. Immunogenicity of Empigen-treated virus in animals, 199
